

I am

a garbage
collector

I'm trying to

collect garbage from
different bins in an
efficient manner

But

Some bins are
empty while others
are overflowing

Because

I have no knowledge of
how full/empty the
bins are till I actually
see it

Which makes me feel

Annoyed when I have travelled
all the way to find no garbage at
all in the bin or bins that have
too much garbage with waste
spilling out

miro

I am

a resident of a
metropolitan city

I'm trying to

dispose my
waste
hygienically

But

I find the bins
overflowing
sometimes

Because

Of the excess waste
collected on few days and
the waste is still picked up
at the regular frequency

Which makes me feel

Disgusted, unhygienic
and unsafe as I'm
prone to diseases
